

# **React Temelleri**

Kurulumsuz React Projesi Geliştirme

**React Nedir?** 

React bir Javascript kütüphanesidir.

1 React CDN

2 React Projesi

create-react-app

vite

#### **React Nedir?**

React bir Javascript kütüphanesidir.

React ile kolaylıkla bir dinamik görüntüler (view) oluşturabiliriz.

#### **Pure Javascript**

```
function App() {
    return "<h1>BTK Akademi</h1>";
}
```

#### React

```
function App() {
    return (<h1>BTK Akademi</h1>);
}
```

JSX - Javascript XML

#### **Pure Javascript**

#### React

```
function App() {
    const kurum = "BTK Akademi";
    return (<h1>{kurum}</h1>);
}
```

```
AliAliAyşeAhmet
```

#### **React Nedir?**

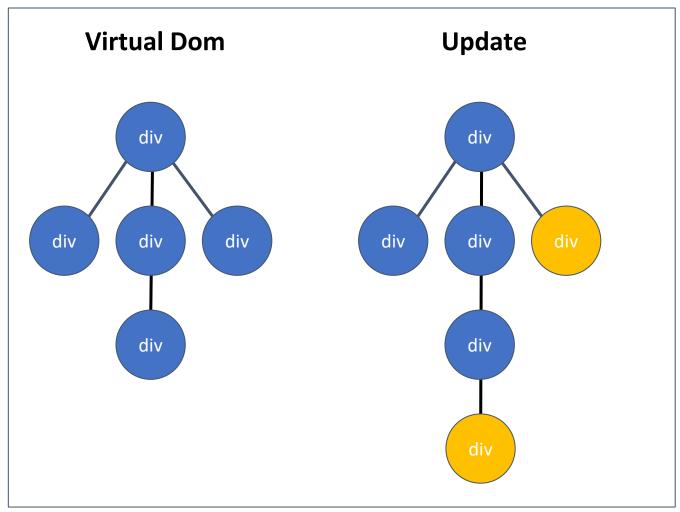

React bir Javascript kütüphanesidir.

React ile kolaylıkla bir dinamik görüntüler (view) oluşturabiliriz.

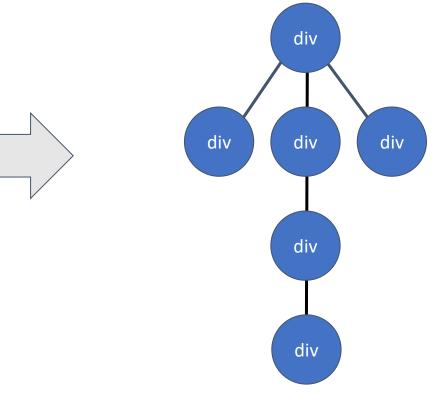

Virtual Dom kullanır.

#### **Render to DOM**

## React Kullanmanın Avantajları

- 1 Düzenli bir proje yapısı
- 2 Kolay kullanım
- **3** Performans

# **React Temelleri**

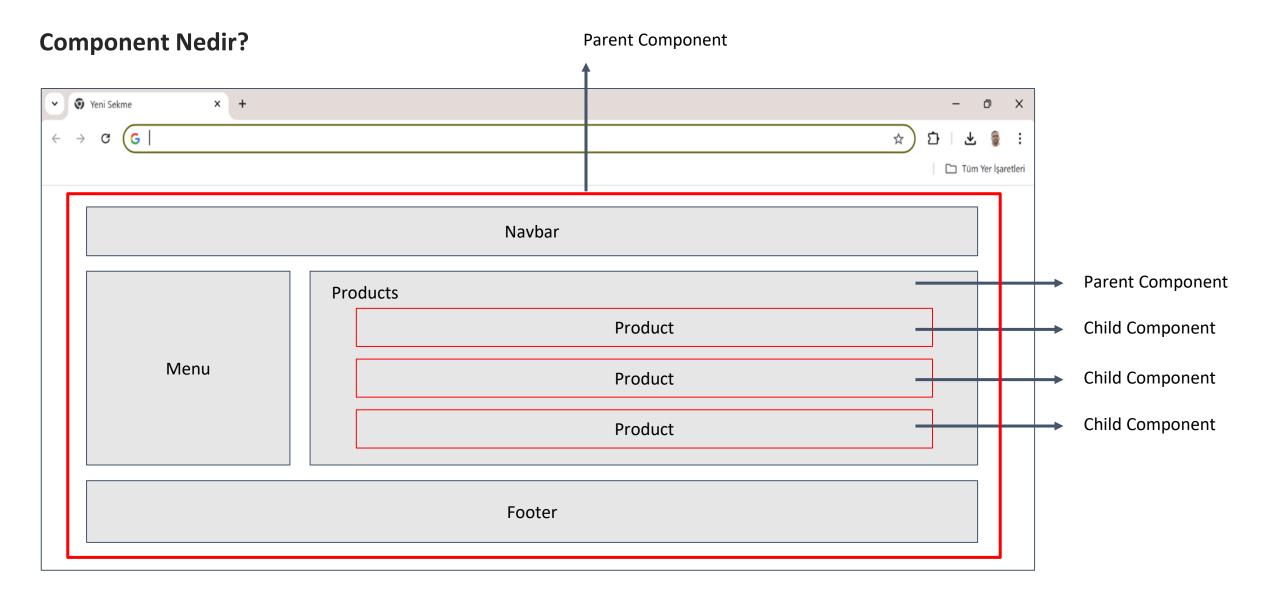

Projemizi İnceleyelim

# **React Components**

**Component Nedir?** 

# **React State & Events**

**React Events** 

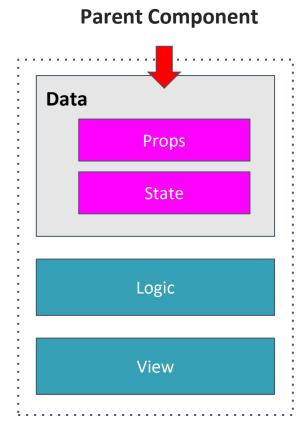

# **React State & Events**

**State Nedir?** 

Component

### **State Nedir?**

State component' in hafizasidir.

- 2 State güncellediğinde component tekrar render edilir.
- 3 Local değişkenler korunur.

## **State Yöntemleri**

- 1 useState()
- 2 useReducer()
- 3 Context API
- 4 React Redux

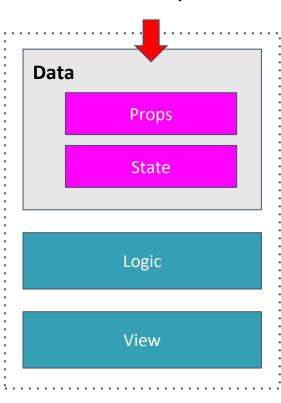

# **React State & Events**

**State Management** 

# Component

#### **Parent Component**

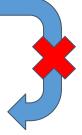

- Değişecek bilgiler State ile tanımlanır.
- State güncellendiğinde component tekrar render edilir.
- Değişmeyecek sabit bilgiler const ile tanımlanır.
- Parent component child component'e props ile veri gönderir.
- State kullanıldığı component içinde tanımlanırsa Local State olur.
- Local state eğer child component' de kullanılacaksa props ile gönderilir.
- State eğer kardeş (sibling) component' de kullanılacaksa parent component' e taşınması gerekir.

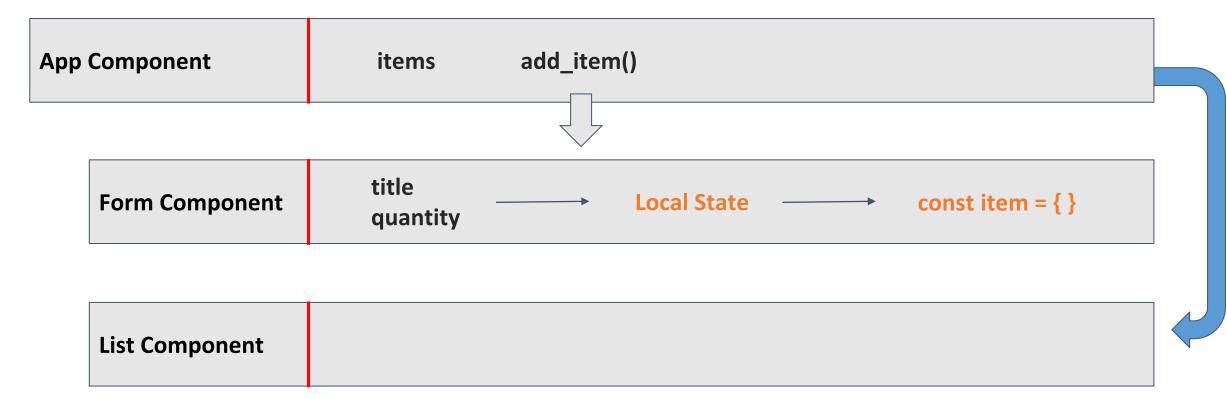

Form Component title quantity — Local State — const item = { }

List Component items

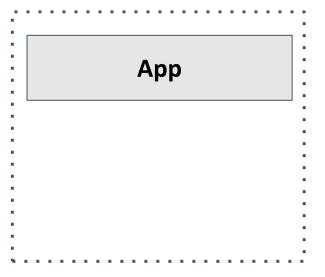

# **React State & Events**

**Global State** 

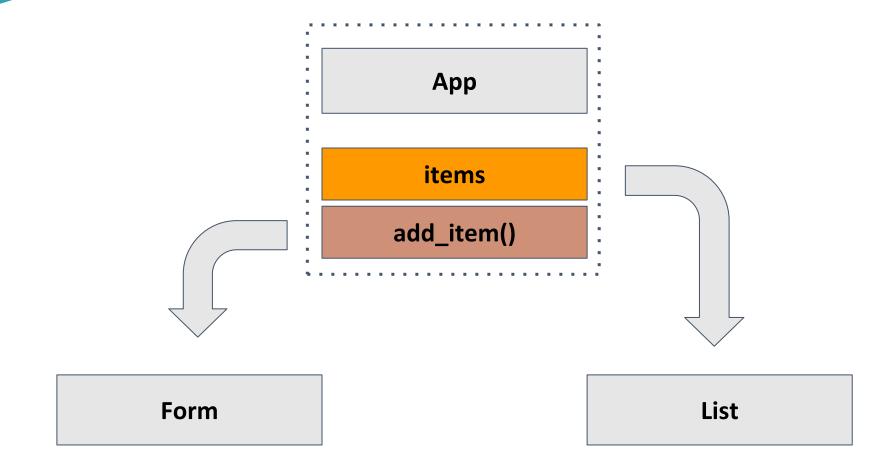

Form

items

add\_item()

# **Component Compositions**

**PropTypes** 

**UseEffect & APIs** 

**UseEffect** 

**UseEffect & APIs** 

**UseEffect Cleanup Function** 

#### **Component Lifecycle**

Mount (First Render)

Component' in ilk render edilme anı.

**Re-Render** 

Component' in tekrar render edilmesi. (state, props güncellemesi)

Unmount (Destroy)

Component' in silinme anı.

```
useEffect(() => {
    return () => {
        // Cleanup
    };
}, []);
```

```
useEffect( () => {
    let timerId = setTimeout( () => {
    }, 1000);

// clear the timer when component unmouts
    return () => clearTimeout(timerId);
}, [ ]);
```

## **UseEffect & APIs**

**Component Files** 

# **Form Validations**

Validations in useInput()

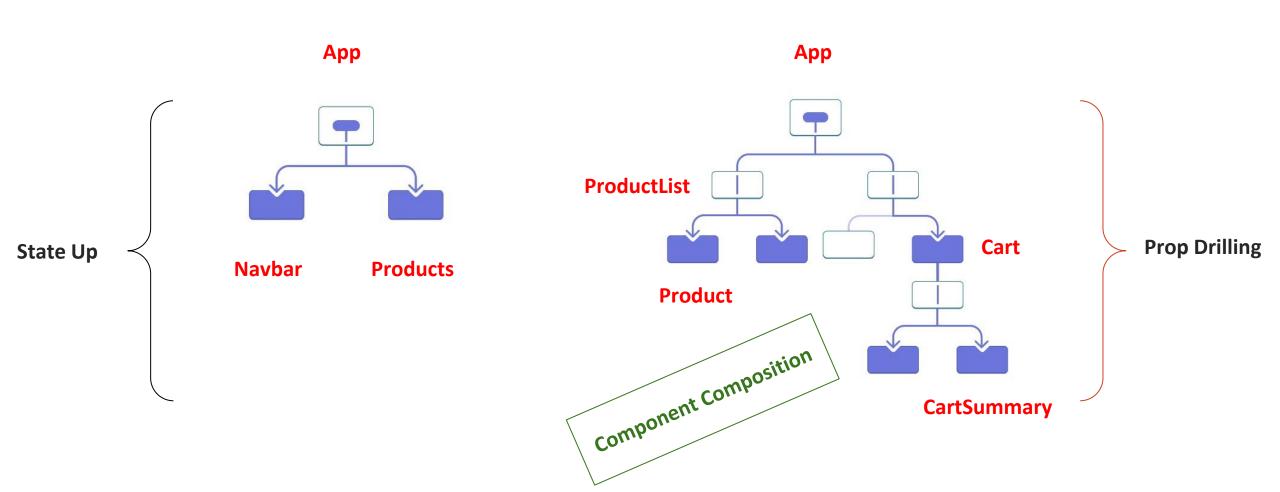

# **Context Api & Reducer**

**Context Api** 

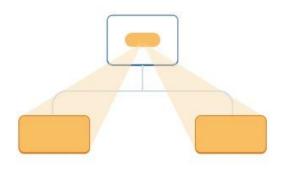

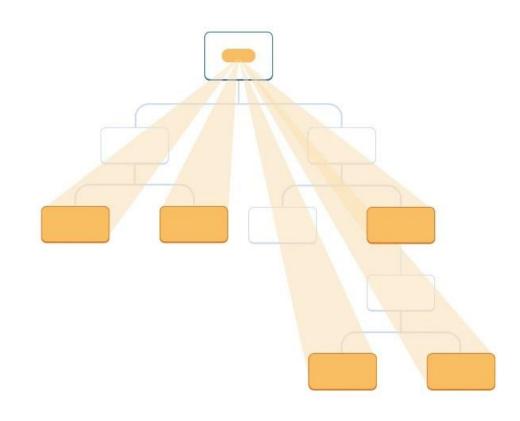

## useState()

## useContext()

**Material UI** 

**Card** 

İleri Seviye Konulara Giriş

# **İleri Seviye Konular**

- React Redux
- React Router
- Authentication
- React Query
- Next.js
